About Mosby's Nursing Skills

Mosby's Nursing Skills gives you convenient access to evidence-based skills and procedures from any computer in your organization. The content has been adapted from the most authoritative nursing resources, fused with insight from leading nursing societies, and is continuously updated to reflect the latest evidence-based practice.

Mosby's Nursing Skills...

- Is a skills and procedure reference system
- Includes over 1,100 interactive skills from leading nursing references
- Features customizable step-by-step procedures with illustrations and multimedia demonstrations
- Includes supplementary material such as searchable patient handouts
- Offers interactive testing with instant feedback
- Features an announcement section so you can keep up with hospital news and alerts.
- Is accessible 24 hours a day

This Learner Guide will help you get started using **Mosby's Nursing Skills** so you can prepare for expert care.

Using Mosby's Nursing Skills

Accessing Mosby's Nursing Skills

Generic Access

Generic Access gives you the ability to access the content of Mosby's Nursing Skills without the need for logging in. This access method still gives you complete access to all skill content but you will not see any personal task assignments or announcements that are assigned to you and you will not be able to take any tests. This access method is an institutional choice so if you only see a login box when you come to the site they your institution has chosen not to utilize this feature.

The screenshot shows the Mosby's Nursing Skills website interface. At the top, there is a navigation bar with the logo "MOSBY'S NURSING SKILLS" and a login section with fields for "Learner ID" and "Password", and buttons for "Login" and "Forgot?". Below the navigation bar is a search bar with a "Search for" field, a dropdown menu set to "Skills", and buttons for "Go", "Advanced Search", and "Search Mosby's Nursing Consult". A "Browse By" section includes an "Index" tab and a grid of letters from A to Z, with "Other" below. The main content area is titled "Community Hospital - Home" and features a "Current Announcements" section dated "Wednesday, November 16, 2011". The announcement table has columns for "Title", "Message", and "Expires". The first announcement is titled "Welcome to Mosby's Nursing Skills" and contains the message "Mosby's Nursing Skills is an online skills and procedures reference system from Elsevier, publisher for Mosby and S..." with an expiration date of "12/14/2012". At the bottom, there is a footer with links for "Home", "Help", "About Us", "FAQ", "Terms and Conditions", "Privacy Policy", and "Contact Us", along with the Elsevier logo and copyright information: "Copyright © 2006 - 2011 Elsevier Inc. All Rights Reserved."

Logged In Access

Your institution may provide you with a username and password to access Mosby's Nursing Skills. With this login you will have access to some functionality that you would not have with generic access. You will have the ability to see announcements that were sent specifically to you, you can check assignments and take tests. This guide covers several features that are specific to being a logged in user, so if you do not see a particular area discussed in this document you may need to be logged in to see them.

My Account

If your institution provides a **Username** and **Password** to access the system, you can modify your password and email address by clicking on the My Account link at the top center of the page. If you have not been provided with an account you will not have access to the **My Account** section. Click **My Account**, located at the top of the screen to change your password. Enter a password in the New Password field, and re-enter it in the Verify Password field. Passwords can contain up to 20 alphanumeric characters and no spaces. To change your Email address, enter a new address in the Email address field. Click **Save** to save any changes. Note that it is necessary to include an email address when changing a password.

Tasks

[Chest Tube Placement](#)

Announcements

The **Current Announcements** section lists items that have been sent to you by someone at your institution.

Pending Tasks

The **Pending Tasks** section displays tasks assigned to you. You will only see **Pending Tasks** if your institution assigns Skills through the system. You can click on a task names in the list to get started on that task. From within the task you will see a list of the Skills that have been assigned with this task. Each skill in the list is a link that will take you to the content of the skill to get started.

Searching for Skills

You can search for Skills using one of four methods:

- By using the search box to type in a keyword
- Browse using the alphabetical index
- Browse for the Skill within a specialty
- Browse for the Skill within a category

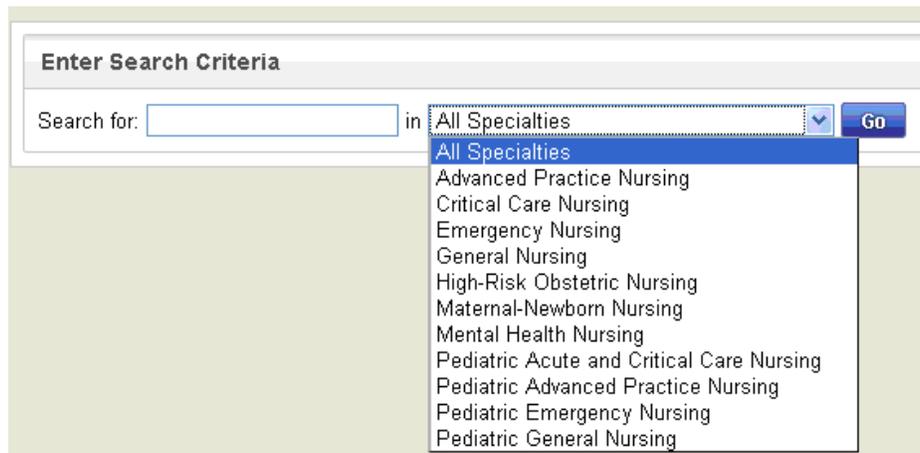

The Search Box

Enter a keyword or phrase and click the Go button. The application displays a list of skills related to the entered keyword(s). Each skill in the list is a link that will take you to that skill's content.

Advanced Search

Click the Advanced Search link to search keywords within selected specialties. The drop-down list allows the selection of the appropriate specialty to search within.

Browse By:

Alphabetical Index

The alphabetical index provides the ability to display a list of skills whose title begins with the selected letter. To view a list of skills that start with a particular letter, simply click on the letter and the list of results will be displayed.

Category

Each skill is associated with one or more of a list of available categories. To display a list of skills by category simply click on a particular category link and the appropriate list of skills will display.

The screenshot shows the 'Admin Facility - Skills Search' interface. At the top, there is a search bar with the text 'Search for' followed by an input field, 'in Skills' with a dropdown arrow, a 'Go' button, and a link to 'Advanced Search'. Below the search bar, on the left, is a 'Browse By' sidebar with three tabs: 'Index', 'Specialty', and 'Category'. The 'Category' tab is selected, showing a list of categories including 'All Categories', 'Administrative Tasks', 'Airways', 'Antepartum', 'Anthropometric Measurements', 'Cardiac', 'Category', 'Chest Physiotherapy', and 'Chest Tubes'. On the right, the main content area is titled 'Admin Facility - Skills Search' and contains a search box with the text 'Search within this index for' and a 'Show Results' button. Below this, there is a section titled 'Browse by "Airways" Category (55 items)' with a list of skills: 'Abdomen Assessment', 'Airway Foreign Object Removal', 'Airway Positioning', 'Airway Positioning (Pediatric)', and 'Chest Drainage System, MANAGEMENT OF CHEST TUBE AND HEIMLICH VA'.

Patient Education

Mosby's Nursing Skills also contains **Patient Education** that can be printed and provided to patients. Patient handouts available on the product are searchable by using the keyword search box located at the top center of the page. To search for handouts simply click on the down arrow to the right of the search box to switch the search to Patient Education. Enter the necessary search term and click Go to get a list of all related Patient Education handouts.

The screenshot shows the search bar from the Skills Search interface. The search bar contains the text 'Search for' followed by an input field, 'in Skills' with a dropdown arrow, a 'Go' button, and a link to 'Advanced Search'. The dropdown menu is open, showing two options: 'Skills' and 'Patient Education', with 'Patient Education' highlighted in blue.

Tools

The **Tools** section on the left side of the screen makes it easy to find Skills and manage tasks assigned to you. You must be logged in to see the **Tools** section.

The screenshot shows the 'Tools' section of the interface. It is a vertical list of links: 'Tools', 'Skills History', 'Tasks', 'Saved Skills', 'Recent Searches', and 'Transcript'.

Skills History

Skills History shows tests that you have attempted and/or completed, as well as any checklist grade you received, if they were assigned. Clicking on the grade for a completed checklist allows you to see the checklist as it was graded and any comments made by the preceptor.

To further narrow down the displayed list, enter a date range in the View Skills “from” and “to” fields located above the results list.

Tasks

Tasks are assignments that have been created by your manager and can contain any number of skills that have been assigned to you. Tasks can consist of an assigned test as well as a checklist that would need to be filled out by a preceptor.

The task list can be sorted by Task Name, Start Date and Due Date by clicking on column headers. To access a particular task assignment, click on the Task name to be taken to the list of Skills that are assigned within that task. The list of Skills that display will be links that will take you to each Skill's content.

Transcript

The Transcript shows skill assignments that you have completed. If a task was assigned to you and there was a test and checklist required, both will have to be completed for the skill to show up in the Transcript section. Remember that only a preceptor can complete the checklist portion of a skill.

You may sort the list by Skill Name, Task, or Date Completed. Click on the column heading to switch sorting options.

The screenshot shows the Mosby's Nursing Skills website interface. At the top, the logo "MOSBY'S NURSING SKILLS" is displayed. Below the logo, there is a navigation bar with "Welcome Phillips, Jim | Logout | MyAccount". The main content area is titled "Admin Facility - Transcript" and includes a search bar with "Search for" and "in Skills" dropdowns, a "Go" button, and a link to "Advanced Search". There are also buttons for "Export to Excel" and "Print". A "View transcript from:" section has two date input fields and "Go" and "Clear" buttons. Below this, the transcript for "Jim Phillips" is shown as a table:

Skill Name	Task Name	Completed Date	Test Score	Attempts	Checklist Grade	Certificate
Chest Tube Insertion	Chest Tube Placement	11/16/2009	100	4	N/A	PDF

On the left side, there is a "Browse By" section with "Index", "Specialty", and "Category" tabs. Below the "Index" tab, there is a grid of letters from A to Z. A "Tools" section is also visible, with "Transcript" highlighted by a red circle.

In addition, you may print a certificate listing your name, the completed skill and the date you completed the skill. Click the PDF icon in the Certificate column to open a print preview window containing the certificate. You can save or print the PDF Certificate.

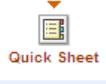

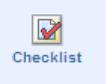

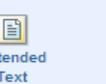

Skill Details

Once you click on the skill you'd like to learn or review, you can access that skill's quick sheet checklist, a supplies list, a test, demonstrations, illustrations, and the full text of the skill. You'll find everything you need to master the skill.

Quick Sheet

The **Quick Sheet** section is a short step-by-step summary of the skill.

Anesthesia Bag Ventilation

 Quick Sheet
  Checklist
  Supplies
  Test
  Demos
  Illustrations
  Extended Text

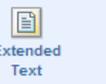

Quick Sheet

1. Perform hand hygiene and apply clean gloves.
2. Assess the patient's airway and adequacy of respiration.
3. Assess vital signs, including pulse oximetry, if time permits.
4. Secure an open airway, and position the patient's head and neck properly.
5. Suction any foreign matter out of the airway.
6. Connect the oxygen tubing to the oxygen flowmeter and the gas inlet on the anesthesia bag. If less than 100% oxygen is indicated, an air or oxygen blender is needed.
7. Turn on the oxygen flowmeter to allow the bag to fill halfway. Adjust the flow-control valve to keep the bag approximately half full.
8. If the patient is not intubated, choose a mask that covers the patient's nose, mouth, and the groove between the base of the lower teeth and the chin. Attach the mask or the endotracheal tube to the anesthesia bag.
9. Test the unit by placing the mask against your hand and squeezing the bag to feel the flow. Observe the cycle of inflation, gas delivery, and reinflation.

Check List

The **Check List** can be used for checking competency of a particular skill. They can be printed and used to review during the actual procedure to insure that all steps of the procedure are followed accordingly.

Anesthesia Bag Ventilation

 Quick Sheet
  Checklist
  Supplies
  Test

Checklist

S = Satisfactory | U = Unsatisfactory | NP = Not Performed

	S	U	NP	Comments
Performed hand hygiene and applied clean gloves.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Assessed the patient's airway, respirations, and vital signs, including pulse oximetry.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Secured an open airway and positioned the head and neck properly.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Suctioned the airway.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Connected oxygen tubing to the oxygen flowmeter and anesthesia bag.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Adjusted flow-control valve to keep the bag half full.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Supplies

The **Supplies** section includes a list of all the supplies you will need to perform the skill.

Anesthesia Bag Ventilation

Quick Sheet Checklist **Supplies** Test Demos Illustrations Extended Text

Supplies

- Anesthesia bag
- Oxygen or air flowmeter
- Oxygen-connecting tubing
- Suction equipment
- Mask (if patient is not intubated)
- Pressure gauge or manometer (This is highly desirable if the anesthesia bag has a pressure gauge port; essential with infants and neonates. If no manometer is used, the port should be capped.)
- Compressed oxygen continuous flow or compressed room air continuous flow

Excerpted and adapted from *Emergency Nursing Procedures, Fourth Edition*, by Jean A. Proehl, RN, MN, CEN, CCRN, FAEN, St. Louis: Saunders, 2009.

Test

Each Skill includes a **Test**. The test is an interactive online test that offers immediate feedback and reporting. The test can be assigned to you by your manager or you have the ability to take the test to evaluate your knowledge on a particular skill. You must be logged in to record test scores.

Anesthesia Bag Ventilation

Quick Sheet Checklist Supplies **Test** Demos Illustrations Extended Text

Test

(Please select only one answer for each of the following questions)

1. The most serious complication related to the use of an anesthesia bag is:

[Go to Question 2](#)

- A. Hypoxia
- B. Gastric inflation
- C. Eye damage
- D. Fatigue

Demonstrations

The **Demonstrations** offer narrated and closed captioned animations and/or videos of how to perform a Skill. An easy-to-use player presents the demonstrations and allows you to pause, replay a step, skip to previous and next steps or jump to a specific step in the available drop down menu

Illustrations (click image to enlarge)

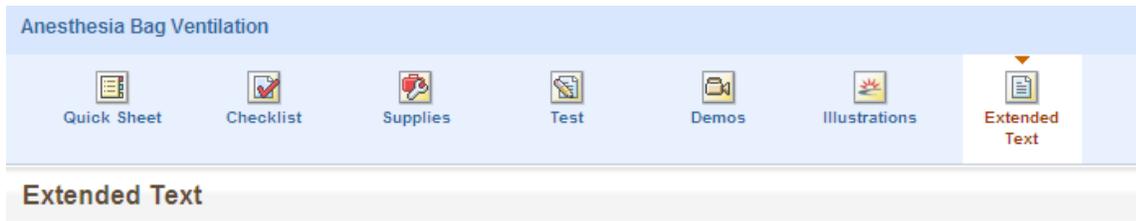

Figure 1

An anesthesia bag requires a constant gas flow to inflate. (From Walsh-Sukys, M. C. [1997]. Bag and mask ventilation [p. 29]. In M. C. Walsh-Sukys & S. E. Krug [Eds.], *Procedures in infants and children*. Philadelphia: Saunders, with permission.)

Extended Text

The Extended Text section gives you access to comprehensive information about the skill. It contains an overview, assessment and preparation, in-depth information about each step of the procedure, and post procedure info with expected outcomes as well as those that might not be expected. It includes patient teaching information as well as documentation items. It contains everything you should need to know to be able to master the skill.

ALERT

Specific training is required for nurses who perform this procedure.

Anesthesia bags cannot be operated on uncompressed room air; thus a self-filling bag-mask device should always be available in case of failure of compressed gas sources.

Anesthesia bags are difficult to use in mask-ventilated patients. In difficult airway situations, two or three hands may be needed to manipulate the mask and airway, and an additional person may be needed to squeeze the bag. A self-filling bag-mask may be preferable in this situation.

OVERVIEW

An anesthesia bag is also known as flow-inflating bag, Ayre's bag, A-bag, Jackson-Rees circuit, Mapleson-F circuit, bellows, manual resuscitator, and balloon bag. This type of resuscitation bag relies on a continuous source of compressed oxygen or mixed gases to deliver ventilations. No valves are in the circuit, so no additional work is imposed on the patient taking some spontaneous breaths. Occasionally, an outlet valve is present at the tail of the bag suitable for exhausting/scavenging anesthetic gases. At lower flows, some gas can be conserved; but in emergency practice, the valve is primarily used to adjust the amount of continuous positive airway pressure (CPAP) at a given flow rate.
